CATEGORY Correlation Analysis

KEYWORDS Statistical analysis, Statistical properties of seismicity, Geo-resource production impact, Production – seismicity interaction

CITATION Please acknowledge use of this application in your work: IS-EPOS. (2017). *Cross Correlation* [Web application]. Retrieved from https: //tcs.ah-epos.eu/

Step by step

In order to use the **Cross Correlation** application the user must have a time series data available in the workspace. This is the mandatory input to the application. The time series data can be easily created with other tools available on the EPISODES Platform, as described below.

The workflow for Crosscorrelation application:

- 1. Choose the catalog (or extract part of the catalog with Catalog Filter) from a selected episode.
- 2. Add to user's workspace the Catalog to Vector converter application. It allows to extract vectors of time and time–correlated attributes of user's choice from the seismic catalog.

Select the seismic catalog to be used and choose the parameters to be analyzed: a column with time and any parameter from the Catalog for which the correlation is to be made (Time and eg. Mw).

Catalog to Vect	cors converter	ACTIONS ~
File CatalogToVectors	Description Tool for converting a Catalog into a series of vectors that can be further use. <u>EXPAND</u>	
INPUTS		
Catalog () Required 1 file	CrossCorrelation/CatalogToVectors/CZORSZTYIN_catalog.mat	CLEAR
Catalog columns 0	Time V X May V X Ima Language Longuage	
SAVE RUN Enable	Depth Earlier Sealer Se	
Status: Finished O	ML MTrr MTra MTre	
OUTPUTS	MTn MTn MTn ISO	
Result files: <u>Time.mat</u> <u>Mw.mat</u>	CLVD DC ScriteA DIPA	

- 3. The application generates two files: Time.mat and [chosen parameter name].mat. These are input files to the Time Series Builder application that user should to use next.
- 4. Add the **Time Series Builder** to the workspace. This application allows user to generate data series based on time vector and time-correlated parameter vector files created in the previous step (see figure below).

EPOS Thematic Core Service Anthropogenic Hazards

Time Series bu	ilder	Actions ~
File TimeSeriesBuilder	Description Teol allowing to create time series based on given Time Vector and Real nu <u>EVRAND</u>	
INPUTS		
Time Vector () Required 1 file	CrossCorrelation/CatalogToVectors/Time.mat	CHANGE CLEAR
Real number vector () Required 1 file	CrossCorrelation/CatalogToVectors/Mix.mat	CHANGE CLEAR
Initial time range Calculation mode O Time step	2018 Jan 01 2018 Dec 31 Molum value V 1 Days 2018 Jan 01 2018 Dec 31	
Chosen time series:	A00	
SAVE RUN Enab	le autorun	
Status: Finished		

In the following steps user needs to specify:

- Initial time range - initial time range for analysis

- Calculation mode – specifies way of parameter calculation from the time-correlated parameter vector values to compute time series (see figure below)

Initial time range	2018 Jan 01	2018 Dec 31]
Calculation mode 0	Minium value 🗸 🗸	•	
Time step	Number of occurrences Minium value	~	
Chosen time series:	Maximum value Mean value Range of values Variance Sum of values	2013 Dec 31	CHOOSE FROM PLOT

- Time step - time step used for the analysis (see figure below)

Initial time range	2018 Jan 01	2018 Dec 31
Calculation mode	Minium value	~
Time step	1	Days 💙
	2018 Jan 01	Hours Days Dec 31 CHOOSE FROM PLOT Weeks
Chosen time series:		

- Chosen time series – select a single or multiple range(s) of time for which time series will be calculated. It can be typed manually or selected from interactive graphs (see figure below)

	2014 Mar 04	2014 Aug 31	CHOOSE FROM PLOT
Chosen time series:	2013 Dec 10	2018 Sep 11	CHOOSE FROM PLOT
	ADD		

EPOS Thematic Core Service Anthropogenic Hazards

 Add Cross Correlation application to the workspace. The mandatory input are the time series files generated in the previous step. Two time series files are required. They may belong to the same episode (eg. two time series from a different period of time) or come from different episodes.

User can also specify additional parameters of crosscorrelation function (see figure below)

EPOS Thematic Core Service Anthropogenic Hazards

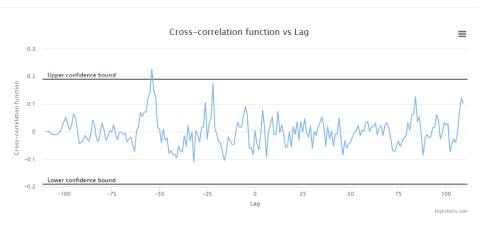

Cross Correlation	
File CrossCorrelation	Description The Cross Correlation is a measure of similarity of two data series as a func EXPAND
INPUTS	
Time Series Required 2 files TimeSeriesBuilder/time_series_2.mat TimeSeriesBuilder/time_series_1.mat	CHANGE CLEAR
Number of lags (1, 109) Number of standard deviations (min. 0.0) 2.0	0 0

Select time series files holding the Ctrl button:

se <mark>2 files</mark> t	to be added to the application.			
atalogExt	ractTimeAndParam			
imeSeries	Builder			
time ser	ies 2 mat			
	-			
rossCorre	elation			
	L			
1	time_ser	atalogExtractTimeAndParam imeSeriesBuilder time_series_2.mat time_series_1.mat rossCorrelation	time_series_2.mat time_series_1.mat	time_series_2.mat time_series_1.mat

The main output from the application is a plot of the crosscorrelation function calculated based on the specified parameters (see figure below):
